

Review Feature Specification

Overview

We want to build a customer review feature, inspired by platforms like [Reco.se](#). This will allow users to leave a **rating (0–5 stars)** and an **optional comment** after a transaction is completed, typically after an **invoice is marked as paid**.

Reviews will be **publicly visible** on a **dedicated review page**. On this page, users will be able to:

- **Search** for companies by **category** or **location**
 - **Browse** companies grouped into relevant categories
 - **View a dedicated page for each company**, showing:
 - Business information
 - Average star rating
 - Total number of reviews
 - All individual reviews
-

Use Case

Trigger: After an invoice has been marked as paid, the user is prompted:

"Would you like to leave a review?"

The user can then:

- **Rate the service** from 0–5 stars
- **Leave a written comment** (optional)

Review will be:

- **Stored** in the database
 - **Displayed** publicly on the company's **review page**
 - **Marked as verified**
-

User Flow

1. Invoice Paid Event

- After a payment is confirmed, a **modal or page** is triggered asking the user to leave a review. This can be triggered by clicking on a button since there is no integration with Fortnox system during case period.

2. Leave a Review

- **Star rating (0–5)**
- **Optional comment**
- Click **Submit**

3. Public Review Pages

A. Company Search and Discovery Page

- Allows users to **search companies** by:
 - **Category** (e.g., Accounting, Consulting, Trades)
 - **Location** (e.g., City, Region)
- Users can also **browse** companies grouped under relevant categories with filters
- Each company listing displays:
 - Business name
 - Category
 - Location

- Average star rating
- Total number of reviews
- Link to the full company review page

B. Company Review Page

For each company, a public profile page shows:

- **Business information**
 - **Average star rating** (based on all reviews)
 - **Total number of reviews**
 - **List of individual reviews**, including:
 - Star rating
 - Comment (if any)
 - Date of review
 - Optional tag: *"Verified review from FinSys transaction"*
-

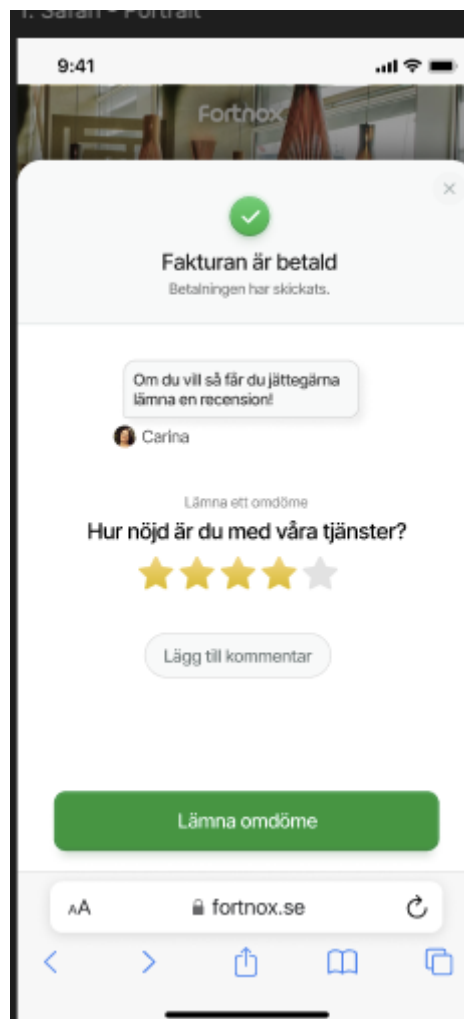

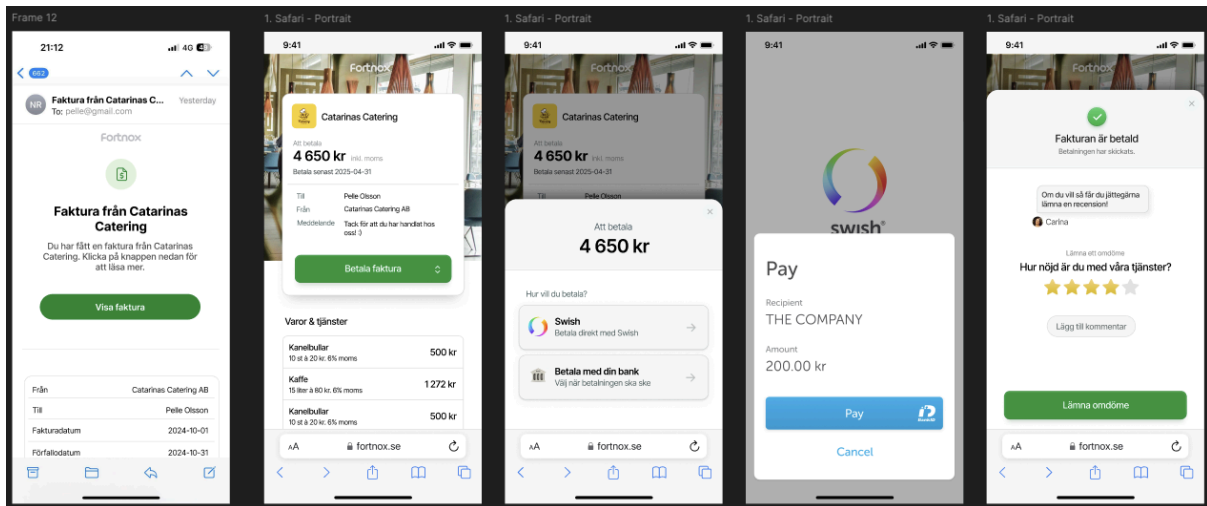

Frontend Requirements (React)

Example design:

<https://www.figma.com/design/ofz63DqTDx0l2BaAkkrLdE/Untitled?node-id=3-164&t=qemKfYNCEWAQWZ51-0>

Review Submission

- Modal or page that appears **after invoice payment**
- Example from Fortnox App below, its the last view that should be developed and it could be a button triggering the view to open in mobile and desktop mode. No interaction with Fortnox system is needed during project.

- Components:
 - **Star rating input** (e.g., star icons)

- **Comment field** (optional)
- **Submit button**

Public Pages

Company Search & Browse Page

- Search bar for keywords or locations
- Category filters (multi-select or dropdown)
- Grid or list layout with company cards:
 - Name, category, location
 - Average rating and review count
 - Link to company review page

Company Review Page

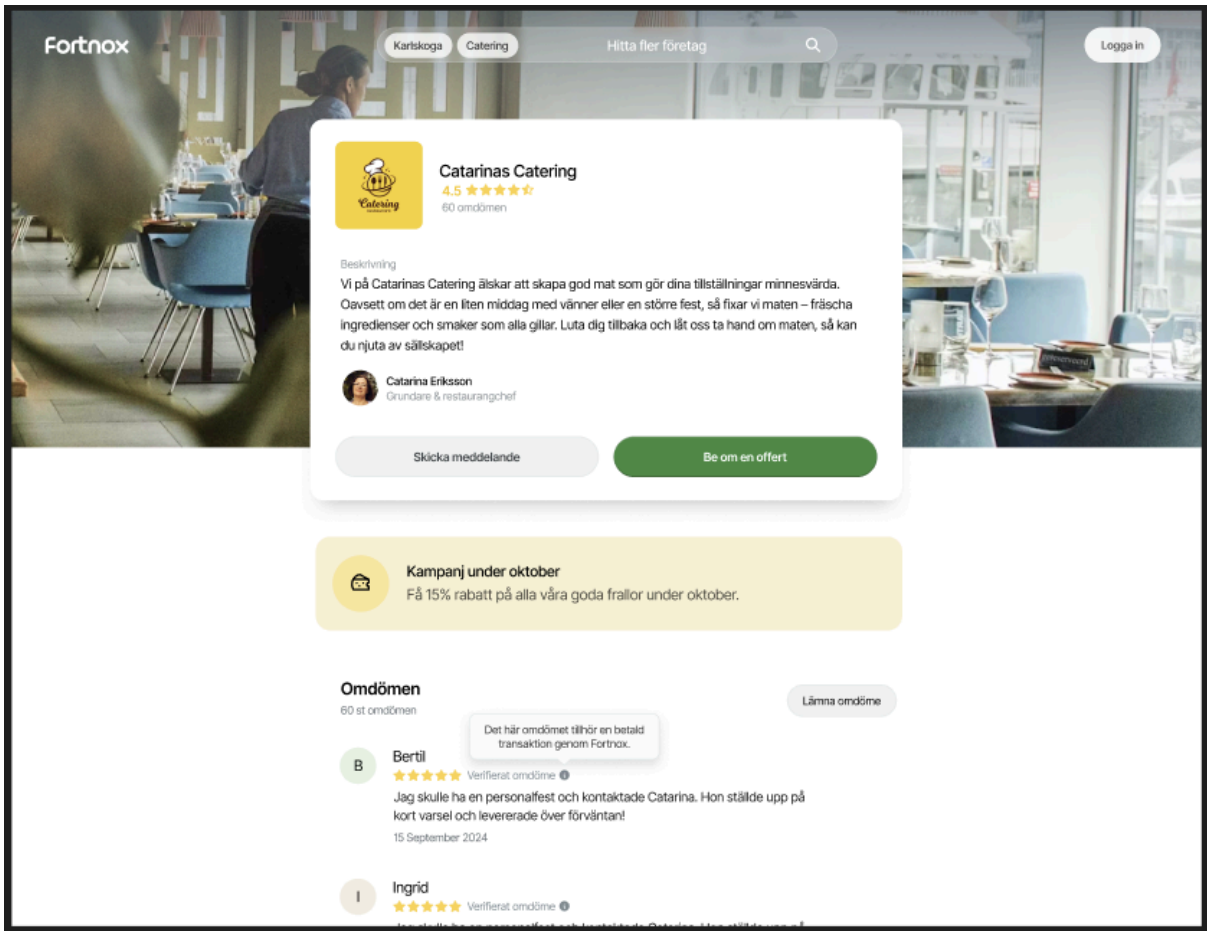

- Header with business name and basic info
- Summary section:
 - Average star rating
 - Total number of reviews
 - Button so send e.g "Skicka meddelande" and "Be om Offert"
- Review list component:
 - Star rating
 - Comment (if provided)
 - Date of review
 - Tag component for verified reviews

Design

- Use **Radix UI theme**

- Responsive layout
- Accessible and mobile-friendly

Example of search bar and company review page:

Backend Requirements (Java + PostgreSQL)

New Entity: Review

Field	Type	Description
id	UUID	Unique identifier for the review
business_id	UUID	Linked to the invoice sender
user_id	UUID	Reviewer (optional for anonymous review)
rating	Integer	Rating between 0–5

<code>comment</code>	Text	Optional comment
<code>created_at</code>	Timestamp	Review submission time
<code>verified</code>	Boolean	<code>true</code> if linked to a real invoice

Endpoints

- `POST /reviews`
Create a new review
- `GET /reviews/business/{id}`
Fetch all reviews for a business
- `GET /reviews/summary/{businessId}`
Get business review summary (average rating, total count)
- `GET /reviews/search?category=&location=`
Search or filter businesses with ratings based on query

Validation & Logic

- Only **one review per invoice per user**
- Link to invoice to mark as **verified**
- Sanitize comment input (e.g. to prevent XSS)
- Optional: Restrict to verified users if needed

Database Schema Example (PostgreSQL)

```
SQL
CREATE TABLE reviews (
  id UUID PRIMARY KEY,
  business_id UUID NOT NULL,
  user_id UUID,
  rating INTEGER CHECK (rating >= 0 AND rating <= 5),
```

```
comment TEXT,  
created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
verified BOOLEAN DEFAULT FALSE  
);
```

Optional Enhancements

- **Filter** reviews by star rating
- **Sort** reviews by most recent or most helpful
- **Allow businesses to reply** to reviews
- **Admin tools** for reporting or moderating reviews

Stretch Goal: Business Admin Review Management

- Add an admin portal where business owners can:
 - Log in securely
 - View all reviews for their company
 - Mark reviews as verified or unverified
 - Delete inappropriate or spam reviews
 - Flag reviews as fraud or similar for moderation
 - Respond to individual reviews
